

Change to Orange Book Therapeutic Equivalence Code

Due to a data integrity issue originating from two contract research organizations—the companies used to test their bioequivalence—the products listed below have lost their AB rating and are now considered BX rated generics. While these products are still FDA approved and able to be dispensed, it should be noted that these **should not be considered automatic substitutions for the branded products listed**. It is recommended that if the prescription is written for the branded product, that any new fills with the affected items be confirmed with the prescriber. These products have not been recalled.
